

Candidate Ranking System for Senior AI Engineer

Hack2Skill INDIA RUNS Challenge

Abhishek Ashok Jadhao

Date: June 19, 2026

The Problem

- • Recruiters receive 100,000+ applications
- • Keyword matching misses qualified candidates
- • Manual screening is time-consuming
- • Risk of hiring trap candidates
- Solution: AI-powered ranking system that understands real experience vs. keyword stuffing

Our Solution Approach

- 1. Data Transformation
 - - Convert 100,000 JSONL profiles to structured CSV
 - - Extract 28 features
- 2. Quality Filtering
 - - AI/ML titles only
 - - 100,000 → 1,939 candidates

Scoring Formula

- 15% Experience + 15% AI/ML Years + 25% Ranking/Retrieval + 20% Tech Stack + 15% Behavioral + 10% Location
- Why These Weights?
- Ranking/Retrieval 25%
- Tech Stack 20%
- Experience 30%
- Behavioral 15%

Data Analysis Results

- 100,000 total
- ↓
- 34,375
- ↓
- 10,672
- ↓
- 1,721
- ↓
- 1,939

Top 10 Ranked Candidates

- 1 Aisha Desai 99.10 BYJU'S
- 2 Anil Joshi 99.10 Microsoft
- 3 Tanya Chopra 99.10 Zoho
- 4 Nisha Pillai 99.10 Sarvam AI
- 5 Ved Kumar 98.95 Mad Street Den
- 6 Rahul Mukherjee 98.80 Verloop.io
- 7 Zara Sen 98.80 Krutrim
- 8 Ela Singh 98.65 Swiggy
- 9 Sai Saxena 98.65 Niramai

Technical Implementation

- Python 3.x
- Pandas
- Jupyter Notebook

- Process:
- Data Loading
- Feature Extraction
- Quality Filtering
- Scoring

Why This Approach Works

- Transparent
 - Scalable
 - Trap-resistant
 - Multi-signal
 - Reproducible
 - Adjustable
-
- Results: 1,939 real AI/ML candidates identified

Project Deliverables

- GitHub Repository
- Ranked Output CSV
- Data Insights
- Presentation

Conclusion

- Problem: Find top 100 AI/ML engineers from 100,000
- Solution: Data transformation, filtering, scoring
- Result: Top 100 ranked candidates
- Next Steps: recruiter integration, A/B testing, U/M analysis
